

“FITFILE ranked among the UK's leading health technology creators in BusinessCloud's HealthTech 50 2026”

FITFILE, a leader in secure and efficient health data access, privacy and linkage, has been named on the HealthTech 50 2026 – BusinessCloud's annual ranking of the UK's most innovative health technology companies.

The list, now in its fourth year, recognises UK companies creating original technology for personal and preventative healthcare, as well as GP practice management and messaging platforms. FITFILE was selected from a 102-strong shortlist, with the final ranking decided through a combination of an expert judging panel and a public vote among BusinessCloud readers.

The panel included senior figures from techUK, the Northern Health Science Alliance, Capgemini, Alvarez & Marsal, Mills & Reeve, Doctorpreneurs and Medic Footprints – reflecting the breadth of clinical, commercial and investment expertise brought to bear on this year's selection.

FITFILE's inclusion follows a period of sustained growth for the company, as it deepens partnerships with NHS data providers and life science organisations across the UK, and extends its federated data infrastructure and privacy-enhancing technology to support faster, safer research and innovation.

"Being named on the HealthTech 50 list is a strong endorsement of what our team has built and the trust our data providers and industry partners place in us," said Philip Russmeyer, Founder and CEO at FITFILE. "Our mission has always been to make health data safer to access and easier to use - recognition like this reflects the impact we have across the system."

FITFILE features alongside established and emerging UK health technology leaders spanning clinical decision support, digital mental health, remote monitoring and care management. The full HealthTech 50 2026 list is available at businesscloud.co.uk.

About FITFILE: Through its globally unique federated software platform, FITFILE connects data providers and data consumers using the safest, most scalable at-source data record processing, privacy treatment and multi-source linkage. Committed to GDPR-compliant privacy, security and data protection by design and by default, FITFILE enables the highest efficiency, lowest risk, and fullest data value for health systems, life sciences and other partners across the UK and Europe – ensuring secure and impactful data utilisation for all.
